During my studies, I developed projects with my teammates and managed project organization. I have experience developing in C/C++, Go, Python. My Bachelor's Thesis was dedicated to the research in the field of Reinforcement Learning. I developed agents capable of making decisions in cognitive environments and presented my research at the International Student Science Conference (ISSC).

From September 2024 to January 2025, I have been doing a research activities at **Excelsior at Huawei**, focused on studying the structure of the Linux OS, namely the process, file system, scheduler, architecture, and mechanisms for isolating and manipulating OS resources.

WORK EXPERIENCE

DevOps Engineer

Excelsior at Huawei
03/2025 - 07/2025

- **Developed** and introduced new features in existing GitLab CI/CD pipelines.
- **Optimized** the pipeline structure to reduce execution time and improve stability.
- **Improved** the readability and maintainability of gitlab runner configurations.

SRE Engineer

SberBank
since 11/2025

- **Developed** AI agent for log analysis.
- **Optimized** Helm charts structure and deployment processes for Gitlab, Jira, Confluence, Nexus. Decreased amount of code in Nextcloud helm repository from 25k to 10k lines of code, presserving the same functionality.
- **Improved** nginx load balancer configuration.
- **Made** patches in Harbor to improve its functionality

PROJECTS

BrickOS

A simplified implementation of the operating system kernel with interrupt handling on C and Assembler

NSTTF (Not So Tiny Tensorflow)

A simplified implementation of Tensorflow in C++ with GPU acceleration support

EDUCATION

Mathematics and Computer Science

System Programming

Novosibirsk State University
Mechanics and Mathematics Faculty, Bachelor,
2022 - 2026

SKILLS

Linux
Algorithms and Data Structures
GitLab CI/CD
Git & GitHub
C, C++, Go, Python
Computer Networks
Docker, K8s
Grafana, Prometheus
ELK

Adaptability
Responsibility
Teamwork
Conflict-free

LANGUAGES

Russian
English
